```
//Asks user for a string than tests if it is a palindrome
#include<iostream>
#include<cstring>
using namespace std;
char word[50];
int main()
  cout << "Enter a string to test if it is a palindrome :
  cin >> word;
  cout << "word size: " << strlen(word);</pre>
  cout << "\n";
  cout << "Your word is " << word << endl;</pre>
  for(int i = 0; i < (strlen(word)/2.0); i++)
     cout << word[i] << " : " << word[strlen(word)-i-1] << endl;</pre>
     if(word[i]==word[strlen(word)-i-1])
     else
        cout << "not a palindrome";</pre>
        return 0;
  cout << word << " IS A PALINDROME!!!!!!!!!!!!!!!!!!!!;";
  return 1;
```
